(57) Abstract: 1,4-dihydropyridine and 1,4-dihydropyran derivatives and novel cosmetic or dermatological sunscreen compositions containing novel and/or known 1,4-dihydropyridine or 1,4-dihydropyran derivatives which are useful for photoprotecting human skin and/or hair against UV radiation, in particular solar radiation, and the use of such 1,4-dihydropyridine and/or 1,4-dihydropyran derivatives as UV-A screening agents, particularly in cosmetic and pharmaceutical compositions.

## SUNSCREEN COMPOSITIONS AS WELL AS DIHYDROPYRIDINES AND DIHYDROPYRANES

The present invention relates to novel 1,4-dihydropyridine and 1,4-dihydropyrane derivatives, to novel cosmetic or dermatological sunscreen compositions containing certain novel and/or known 1,4-dihydropyridine or 1,4-dihydropyrane derivatives which are useful for photoprotecting human skin and/or hair against UV radiation, in particular solar radiation, and to the use of such 1,4-dihydropyridine and/or 1,4-dihydropyrane derivatives as UV-A screening agents, particularly in cosmetic and pharmaceutical compositions.

More particularly, in one aspect the invention relates to novel cosmetic or dermatological 10 sunscreen compositions comprising a 1,4-dihydropyridine derivative of the general formula I or a 1,4-dihydropyrane derivative of the general formula II

wherein

m is 1 or 2;

15 R<sup>1</sup> and R<sup>2</sup> are identical or different electron-withdrawing groups, or one of R<sup>1</sup> and R<sup>2</sup> is hydrogen and the other of R<sup>1</sup> and R<sup>2</sup> is an electron-withdrawing group; R<sup>3</sup>, R<sup>4</sup>, R<sup>5</sup>, are R<sup>6</sup> are, independently, hydrogen, alkyl, cycloalkyl or aryl; R<sup>3</sup> and R<sup>5</sup> and/or R<sup>4</sup>, and R<sup>6</sup> taken together with the carbon atoms to which they are attached, may form a 5 or 6 membered ring which optionally is substituted with one 20 to four alkyl, cycloalkyl or alkoxy groups; X is a moiety R<sup>7</sup>, when m is 1; and is alkylene or poly(oxyalkylene) when m is 2; and R<sup>7</sup> is hydrogen, alkyl, cycloalkyl, alkoxyalkyl or aryl.

As used herein the term "electron-withdrawing groups" refers to groups containing a multiple bond such as a nitrilo (-CN) group or a -COOR<sup>8</sup>, -COR<sup>8</sup> or -CONR<sup>8</sup> group, 25 wherein R<sup>8</sup> is hydrogen, alkyl, cycloalkyl or aryl. Alkyl, alone and in combination with alkoxy refers to saturated straight or branched chain hydrocarbon groups containing 1 to 21, preferably 1 to 8 carbon atoms, such as methyl, ethyl, propyl, isopropyl, butyl, sec. butyl,

10

The term poly(oxyalkylene) as used herein denotes a compound containing a polyether backbone. The polyether backbone can be based e.g. on propyleneoxide (PO), ethyleneoxide (EO) or mixed EO/PO. - 5 to yield a compound of the general formula I wherein  $m$  is 2 and  $X$  is alkylene or poly(oxyalkylene).

The condensation of a compound of formula III with a compound of formula IV can be accomplished by reacting the compounds in acetic anhydride at elevated temperature such as heating to reflux and work-up of the reaction mixture by removal of the acetic an-

- 10 hydride, extraction of the residue with ether and chromatography. The compound of formula II can be converted into a compound of the formula I by reaction with the appropriate amine V or VI at elevated temperature, e.g. at reflux temperature of the reaction mixture. The starting compounds of formula III, V and VI are known or belong to a class of known compounds and can be prepared by methods known per se and/or described hereinafter.

The above formulae I and II encompass novel compounds which, as such, are also an object of the present invention. Where convenient, other conventional UV-A and/or UV-B screening agents, preferably a pigment, may also be added. The combination of UV filters may show a synergistic effect. The preparation of said light screening agents is well known to the skilled artisan in this field. The concentration of UV filters is varied in a wide range. For example, the amount of compounds of formula I or II and optionally an additional hydrophilic and/or lipophilic UV-A or UV-B screening agent  
15 other than the compounds of formula I or II may be in the range of from 0.5 to 12% by weight of the total composition. These additional screening agents are advantageously selected from the compounds listed below without being limited thereto:

## INTERNATIONAL SEARCH REPORT

International application No.  
PCT/EP 03/01049

### Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1.  Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
  
2.  Claims Nos.: 9,10 (both partially)  
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:  
see FURTHER INFORMATION sheet PCT/ISA/210
  
3.  Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

### Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1.  As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
  
2.  As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
  
3.  As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
  
4.  No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

#### Remark on Protest

The additional search fees were accompanied by the applicant's protest.  
 No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 9,10 (both partially)

The initial phase of the search revealed a very large number of documents relevant to the issue of novelty. So many documents were retrieved that it is impossible to determine which parts of the claim(s) may be said to define subject-matter for which protection might legitimately be sought (Article 6 PCT). For these reasons, a meaningful search over the whole breadth of the claim(s) is impossible. Consequently, the search has been restricted to:

the compounds claimed according to claim 9 wherein R1 and R2 have been limited to the meanings given on page 1, last paragraph of the description.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
